

SUCCESS STORY

How we connected Iptor with the intelligent Outputs by InterForm

Aliplast is a company of the Corialis Group headquartered in Belgium and with ~ 2600 employees on five sites. They were searching a new way to organize their Outputs, also to comply with the new EU guidelines. For that reason they were getting in touch with MJR as a InterForm partner in the beginning of 2025.

Aliplast was already convinced after seeing the first demo of the InterForm Output Management solution. A major advantage was the platform independence of the solution. This meant that the InterForm solution could be connected to their Iptor ERP without any problems. It was the first implementation with InterForm and Iptor that time.

Our expertise and experience convinced Aliplast in the following to start the project. And there should be not much waste of time for the implementation either. So MJR did establish the first documents for Aliplast. But within a very short time, Aliplast has already produced further documents independently with the help of training courses and the InterForm help.

They have built up 11 documents very quick, in under four months in InterForm. And in just some weeks the first document did Go-live on their system. For the next step the e-Invoice with the UBL (Universal Business Language) format was created and is about to be published soon. So they were able to create even sophisticated document templates with the help of the InterForm designer.

“Working with MJR was a pleasure! Alexander was always available to help when I had an issue. Not that there were that many since the Interform platform is very intuitive to use.”

Manu Joye | IT Developer @ Aliplast

“After a short training period, the customer was already able to create templates independently and implement the e-Invoicing with InterForm on their own.” Alexander Halfar | InterForm Expert @ MJR

Aliplast is manufacturer for Aluminium doors and windows since 1984. They design and manufacture sustainable aluminium solutions for modern housing, including windows, doors, facades & conservatories. Their products combine functional strength with aesthetic precision, emphasizing recyclability, insulation efficiency, and environmental responsibility.

InterForm A/S was founded in 1987 and is based in Copenhagen (Denmark). With over 4000 installations worldwide every year, over 1 billion outputs are created with InterForm. We are a partner of InterForm over 10 years and will be happy to advise you personally. With InterForm NG2 you are platform independent and can built Outputs with a intuitive Designer or choose ready to use templates.

MJR advises and supports you on all topics relating to output management. We would be happy to arrange a free consultation with you, during which you can find out about all the advantages of InterForm NG2 and our other technologies. As a competent InterForm partner, MJR is always there to support customers in every project step.
